

YOUR TECHNOLOGY PARTNER

Brainstack Technologies

Your Digital Transformation Shouldn't Feel Like a Gamble

Momentum Loss

Projects that start well but lose steam after the first sprint – leaving you with a half-built platform and a new vendor search.

Context Gap

Teams that understand code but not your business domain – delivering technically correct solutions that miss the point.

Punitive Pricing

Pricing models that penalise scope changes – making it costly to adapt as you learn more about your own product.

Brainstack was built to eliminate these friction points. We combine deep domain understanding with engineering discipline – so your technology investments deliver **outcomes, not just outputs**. We operate across agriculture, sustainability, fintech, healthcare, and education: sectors where getting technology wrong has real consequences.

Who We Are

Founded 2016

Delhi NCR (HQ) · Melbourne · US

Serving clients across North America, Europe, India, and Asia-Pacific

5.0

★ Clutch Rating

10+

Years Delivering

Enterprise Pedigree. Startup Velocity.

Brainstack partners with startups, SMEs, and mission-driven organisations to build custom platforms, mobile applications, and data systems. Our founding team brings decades of experience from:

GlobalLogic

The Toshiba logo, featuring the word "TOSHIBA" in red, bold, sans-serif capital letters.

Over a decade of enterprise-grade engineering distilled into a firm that moves with startup agility. Milestone-based billing. Agile delivery via Scrum and Kanban.

Six Practice Areas. One Integrated Delivery Model.

Application Engineering

Custom web and mobile platforms, cloud-native applications, and AI-enhanced systems. Full lifecycle from discovery to deployment and ongoing maintenance.

AI/ML Adoption

Generative AI integration, machine learning model development, AI readiness assessments, and end-to-end implementation across your existing technology stack.

Web & Mobile Development

PWAs, real-time applications, native iOS and Android, cross-platform React Native. E-commerce on Shopify, Magento, and WooCommerce.

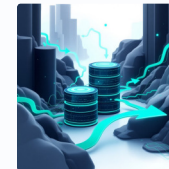

DevOps & Cloud

CI/CD pipelines, Infrastructure as Code, Docker and Kubernetes, across AWS, Azure, and GCP. DevOps as culture – not just toolchain.

Software Testing & QA

Automation-first using Selenium, Appium, Cypress, and JMeter. Our frameworks have reduced regression cycle times by up to **50%**.

Data Engineering

Data pipeline design, ETL/ELT architecture, data warehousing, and Big Data infrastructure for organisations looking to unlock the value of their data assets.gineering

Building Technology for 2000+ Smallholder Farmers

The Challenge

A US-based sustainability nonprofit needed to collect cost-of-production and income data directly from coffee farmers across multiple countries — replacing error-prone paper surveys and intermediary-dependent data flows.

What We Built

- Mobile-first data collection app with an interface designed for users with limited digital literacy
- Backend management system for programme administrators to validate entries and export datasets
- SMS-based survey module for ultra-low-connectivity environments

The Outcome

5.0/5.0

Clutch rating, independently verified

14 months

End-to-end engagement, on-time milestones

USD 80K–200K

Zero scope surprises

☑ "They impressively thought about the design to simplify a complex topic so the farmers could use it."

— Senior Project Manager, verified on Clutch.co

Two More Domains. Same Engineering Discipline.

Fintech – PMS

Built a web application for a fintech firm managing complex financial flows, portfolio tracking, analytics, and reporting. Third-party review on GoodFirms noted our team handled intricate financial logic effectively despite significant project complexity.

Agriculture – DSS System

Developed a web-based analytics platform for the agriculture sector, unifying siloed datasets for collection, cleaning, processing, and decision-making. Delivered via Agile with bi-weekly stakeholder demonstrations throughout.

AI/ML -confidential

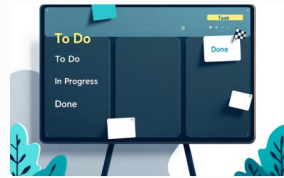

Engaged multiple times by a stealth-mode startup for ML algorithm development. The founder noted our team's deep technical knowledge and consistent dedication to delivery across every engagement.

Choose the Partnership Structure That Suits You

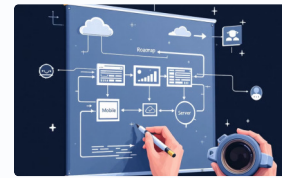

IT Staff Augmentation

Extend your in-house team with specific skills. Our engineers integrate with your workflows, and cadences – functioning as embedded team not external contractors.

Project-Based Delivery

Hand us the brief and we own the outcome. From requirements through to deployment, with milestone-based billing – you pay for progress, not promises.

Technology Consulting

Architecture reviews, technology selection, cloud migration planning, or AI feasibility studies. Actionable roadmaps – and we can stay on to execute them.

Managed Services

Ongoing DevOps, infrastructure management, monitoring, and maintenance. A fractional CTO's engineering team on retainer – without the headcount cost.

📄 Pricing is transparent. Milestone-based billing is standard. No lock-in contracts.

What We Bring to the Table

Timezone Alignment

Our distributed team spans India, Australia, and the US – ensuring 24/7 coverage and real-time collaboration across your timezone.

Cost Efficiency

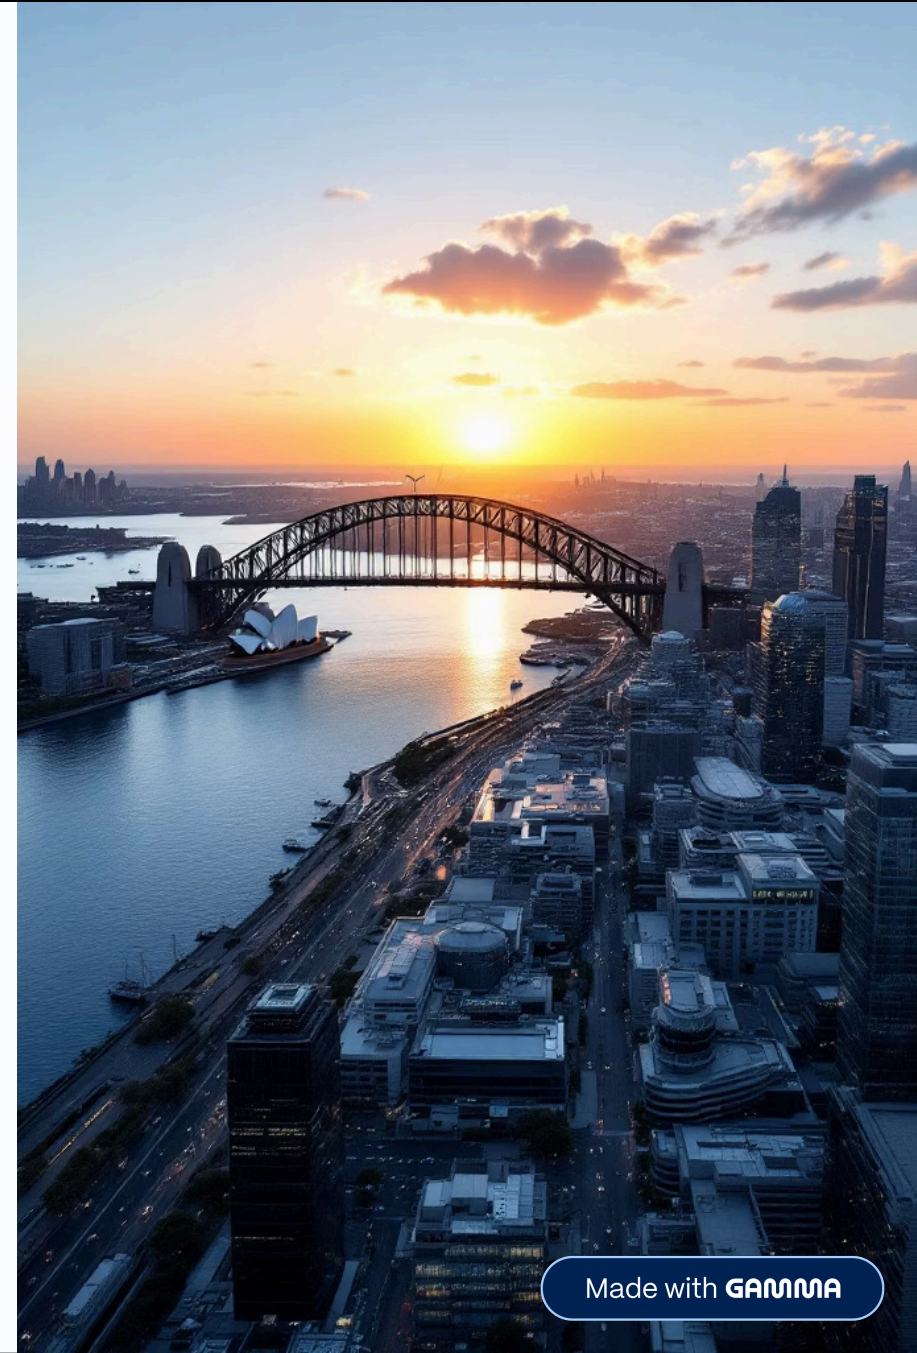

Competitive rates of **USD \$35–75/hour** paired with senior talent and project managers. Enterprise-grade delivery.

Cultural Fit

We have worked across the US, UK, Europe. Our communication is direct, our documentation is thorough, and we value **straight talk over sales talk**. We're expanding our global footprint across key markets. Client referrals available on request

Local Presence

Global presence with local points of contact in key markets for face-to-face relationship building alongside remote delivery. Verified, independent client reviews.

Core Security practices we follow

Data Classification and Handling

- Classify data into Internal, Confidential, & Restricted.
- Protect sensitive data with encryption in transit (TLS 1.2+) and at rest (AES-256).
- Apply access controls as per classification.
- Secure disposal of sensitive data (wiping, shredding)

Access Control

- Role-based access control (RBAC).
- Require MFA for sensitive systems remote
- Review access rights quarterly and promptly upon role changes.
- Segregate duties to prevent unauthorized actions

Incident management

- Report incidents within 24 hours to the ISO.
- Follow the incident lifecycle: Identification → Containment → Eradication → Recovery → Review.
- Conduct post-incident reviews to address root causes. Notify affected clients promptly if applicable.

Employee Security Awareness

- Mandatory onboarding & annual trainings.
- Include phishing simulations, quizzes, and secure coding practices.
- Promote a security-first culture.

Protection of Proprietary and Intellectual Property

- Restrict access on a need-to-know basis.
- Use NDAs with employees and third parties.
- Monitor for unauthorized copying or misuse.

Acceptable Use and System Security

- Follow the company's Acceptable Use Policy.
- Keep systems updated, and protected.
- Use antivirus, firewalls, and IDS/IPS.
- Prohibit personal use of company systems.

Compliance & Enforcement

Compliance is mandatory. Violations may result in disciplinary action, termination, or legal proceedings. The policy reviewed annually.

Monitoring & Audit

Continuous security monitoring, maintain audit logs, and perform periodic internal and external audits to verify compliance.

Risk Management

A formal risk assessment conducted at least annually to identify and mitigate emerging security threats.

Domain Expertise That Matters

We don't just write code — we understand the sectors we build for.

Agriculture & Sustainability

Mobile data collection for smallholder farmers, survey platforms for low-connectivity areas, WhatsApp-based data capture, agricultural DSS — deployed across continents.

Fintech

Portfolio management platforms, financial analytics systems, and complex transaction processing.

We understand regulatory requirements and data security imperatives in financial services.

Healthcare & Education

Data analytics platforms, patient and student management systems, and compliance-ready applications built for regulated industries with rigorous data handling requirements.

EUDR Compliance Technology

Our data collection & supply chain traceability capabilities position us to deliver geolocation validation, farm-level data, and due diligence — precisely what the EUDR demands.

Verified. Unedited. From Real Project Stakeholders.

"They impressively thought about the design to simplify a complex topic so the farmers could use it."

— **Sylvia Calfat, Senior PM (Sustainability Nonprofit)**

Clutch-verified · 5.0/5.0

"Despite the project's complexity involving financial flows, their engineers handled it well. Great knowledge and enthusiasm."

— **Aashish Agarwal, TR Capital (Fintech)**

GoodFirms-verified review

"Their team is incredibly qualified with a high level of professionalism. I'd recommend them to anyone looking to expand in-house capabilities."

— **Richard, Teraquant Corporation (Telecom/IoT)**

"The pricing has been quite competitive, and the quality has been excellent so we got maximum value for money."

— **Ankur Bansal, GDi Partners (Governance consulting)**

Clutch-verified · 5.0/5.0

All reviews sourced from independent third-party platforms. Unedited and unmanufactured.

Your Next Step Is a Conversation, Not a Commitment

We believe the best partnerships begin with honest dialogue. Tell us what you are trying to build – and we will tell you candidly whether we are the right fit.

Schedule a Discovery Call

30 minutes. No sales pitch. A direct technical conversation about your challenges and how we might help.
